

Commercial Revenue & Sales Intelligence Dashboard

Frangle Sales Performance Analysis (2014)

SQL | Microsoft Advanced Excel | Business Intelligence | Sales Analytics

Portfolio Project

Prepared by: Dayo Rex Afariogun

Role: Data Analyst

Executive Summary

This project analyses Frangle's 2014 commercial sales performance using SQL for data extraction and Microsoft Advanced Excel for business intelligence reporting and visualization. The objective was to identify revenue drivers, evaluate customer and sales performance, understand regional trends, and provide strategic recommendations that improve profitability and support executive decision-making.

The dashboard reveals that Frangle generated approximately \$435,000 in revenue, sold 20,600 units, accumulated \$43,700 in shipping fees, and maintained an average unit price value of \$7,800. Revenue is concentrated among a small number of customers, cities, and sales representatives, highlighting both significant growth opportunities and operational risks.

This project demonstrates how descriptive analytics can be translated into practical business strategies that improve sales effectiveness, operational efficiency, customer management, and long-term profitability.

Project Objectives

The objectives of this analysis were to:

- *Analyse overall commercial sales performance.
- *Identify the highest revenue-generating customers.
- *Evaluate sales performance across different cities and regions.
- *Assess salesperson productivity.
- *Identify the highest-performing product categories.
- *Analyse shipping partner contribution.
- *Generate business recommendations supported by data.

Technology Stack

- *Microsoft SQL Server (SQL) – Data extraction
- *Microsoft Advanced Excel – Table Query, Data Analysis, Pivot Tables, Pivot Charts, Dashboard development, and KPI reporting
- *Excel Formulas & Functions – Data transformation and calculations
- *Conditional Formatting – Performance highlighting and trend analysis
- *Interactive Excel Dashboard – Executive reporting and business intelligence

Business Questions Answered

This analysis answers several strategic business questions:

- *Which customers generate the most revenue?

- *Which cities represent the strongest markets?
- *Which sales representatives consistently outperform?
- *Which products contribute most to revenue?
- *Which geographic regions should receive additional investment?
- *Which shipping company handles the highest-value orders?
- *Where are the biggest opportunities for future growth?

SQL Data Extraction

The project began by retrieving the required fields from the Frangles Sales database.
SQL query:

```

1      -- EXTRACT: All columns listed explicitly
2      •  SELECT
3          OrderID,
4          OrderDate,
5          CustomerID,
6          CustomerName,
7          Address,
8          City,
9          State,
10         Zip/PostalCode,
11         Country/Region,
12         Salesperson,
13         Region,
14         ShippedDate,
15
16
17
18         ShipCity,
19         ShipState,
20         ShipZip/PostalCode,
21         ShipCountry/Region,
22         PaymentType,
23         ProductName,
24         Category,
25         UnitPrice,
26         Quantity,
27         Revenue,
28         ShippingFee
29     FROM `Frangles Sales Database`.`Sales Records`;
30
31

```

Dashboard KPI Summary

KPI	Value
Total Revenue	\$435.0K
Total Quantity Sold	20.6K Units
Total Shipping Fees	\$43.7K
Total Unit Price Value	\$7.8K

These KPIs indicate healthy commercial activity supported by strong order volume across multiple regions.

Key Findings

1. Revenue Performance

The company generated approximately \$435K in sales revenue during 2014. This indicates healthy commercial operations and strong customer demand. Revenue growth appears to be driven primarily by a relatively small group of high-value customers and top-performing sales representatives.

Business Implication:

While total revenue is encouraging, dependence on a few large revenue sources increases business risk if those customers reduce spending or competitors capture their business.

2. Customer Sales Analysis

The dashboard shows that:

- *Company D is the highest revenue-generating customer.
- *Companies H, BB, FC and A follow behind.

Business Insight

Revenue concentration among a few customers presents a customer concentration risk. If one major customer leaves, annual revenue could decline significantly.

Recommendation:

- *Improve customer retention.
- *Develop loyalty programmes.
- *Diversify the customer portfolio.
- *Increase acquisition of medium-sized customers.

3. City Sales Analysis

The highest-performing cities include:

- *New York
- *Portland
- *Miami
- *Memphis
- *Chicago
- *Albuquerque

New York clearly contributes the highest commercial revenue.

Business Interpretation

New York should be viewed as Frangle's flagship market.

The company should continue investing in:

- *Marketing
- *Customer service
- *Inventory
- *Sales staff

Lower-performing cities represent expansion opportunities that require additional market research.

4. Regional Performance

Regional analysis shows:

- *North Region generated the highest revenue.
- *East Region follows closely.
- *South Region performs moderately.
- *West Region contributes the lowest share.

Strategic Insight

The company should continue strengthening operations in high-performing regions while investigating barriers affecting sales growth in weaker regions.

Potential causes include:

- *Market competition
- *Distribution limitations
- *Lower marketing investment

*Reduced customer awareness

5. Salesperson Performance

The dashboard highlights significant differences in salesperson performance.

Top performers include:

*Nancy Freehafer

*Anne Larsen

*Andrew Cencini

These representatives generate substantially more revenue than other team members.

Business Interpretation

High-performing sales staff possess effective selling strategies, stronger client relationships, and better product knowledge.

Management should:

*Study their sales process

*Share best practices

*Implement coaching programmes

*Standardise successful selling techniques

6. Product Sales Analysis

The leading revenue-generating products include:

*Coffee

*Curry Sauce

*Marmalade

*Mozzarella

*Crab Meat

Coffee contributes the highest revenue.

Business Insight

High-performing products should receive:

*Greater inventory allocation

*Marketing investment

*Promotional campaigns

Slow-moving products should be reviewed for pricing adjustments or replacement.

7. Shipping Revenue Analysis

Shipping revenue is distributed among three logistics providers:

*Shipping Company A

*Shipping Company B

*Shipping Company C

Shipping Company C appears to contribute the highest shipping revenue.

Business Insight

This may indicate:

Better customer coverage

Larger order values

Higher delivery frequency

The business should evaluate:

*Delivery costs

- *Delivery time
 - *Customer satisfaction
 - *Shipping profitability
- to determine whether this partnership should be expanded.

Executive Business Insights

The dashboard highlights several strategic opportunities.

Strengths

- *Strong overall revenue
- *Healthy product demand
- *Strong performance from top salespeople
- *Strong regional market leadership
- *Diversified product portfolio

Weaknesses

- *Revenue depends heavily on a few customers.
- *Large performance gap between sales staff.
- *Regional imbalance.
- *Uneven city performance.
- *Potential logistics optimisation opportunities.

Financial Interpretation

Revenue

The company generated approximately \$435K in sales.

Higher revenue strengthens:

- *Income Statement
- *Gross Profit
- *Operating Income
- *Net Profit

provided operating costs remain under control.

Inventory

High-selling products indicate efficient inventory turnover.

Efficient inventory management reduces:

- *Holding costs
 - *Warehousing expenses
 - *Obsolete inventory
- while improving cash flow.

Cash Flow

Consistent sales generate stronger operating cash flow, enabling the company to:

- *Purchase inventory
- *Invest in expansion
- *Hire additional staff
- *Improve technology
- *Reduce borrowing

Accounts Receivable

If a significant proportion of sales are made on credit, revenue may increase while cash collection is delayed.

Management should monitor:

- *Debtor ageing
- *Collection periods
- *Bad debt risk

to maintain healthy liquidity.

Balance Sheet Impact

Sales performance directly influences the Balance Sheet in several ways:

Assets

Successful sales increase:

- *Cash (when customers pay promptly)
- *Accounts Receivable (for credit sales)
- *Inventory turnover, reducing stock held

Equity

Higher profits increase:

- *Retained Earnings
- *Shareholders' Equity

A stronger equity position improves financial stability and borrowing capacity.

Liabilities

Improved cash generation reduces reliance on external financing and short-term debt.

Recommendations

1. Reduce reliance on a few major customers by expanding the customer base.
2. Replicate the sales techniques of top-performing representatives through structured coaching and mentoring.
3. Increase investment in high-performing cities such as New York while investigating underperforming markets.
4. Prioritise inventory planning for best-selling products to prevent stock shortages.
5. Conduct a logistics performance review to optimise shipping costs and delivery efficiency.
6. Implement customer segmentation and targeted marketing campaigns to improve sales across lower-performing regions.
7. Introduce KPI dashboards to monitor revenue, customer retention, inventory turnover, and salesperson performance in real time.

Skills Demonstrated

This project demonstrates proficiency in:

- *SQL Data Extraction
- *Microsoft Advanced Excel
- *Table Query
- *Pivot Tables & Pivot Charts
- *Excel Dashboard Design
- *Data Cleaning and Transformation
- *KPI Reporting
- *Sales Performance Analysis
- *Commercial Revenue Analytics
- *Customer Segmentation

- *Geographic Sales Analysis
- *Product Performance Analysis
- *Revenue Trend Analysis
- *Business Intelligence Reporting
- *Executive Data Storytelling
- *Strategic Business Recommendations

Conclusion

The Frangle Sales Performance Analysis demonstrates how raw transactional data can be transformed into meaningful business insights using SQL and Microsoft Advanced Excel. SQL was used to extract the sales data, while Advanced Excel was leveraged to query the sales data using Table Query and build an interactive executive dashboard using Pivot Tables, Pivot Charts, slicers, formulas, and KPI cards. The analysis identifies key revenue drivers, evaluates customer and regional performance, measures salesperson productivity, and uncovers opportunities to improve operational efficiency and profitability.

From a portfolio perspective, this project showcases end-to-end analytical capabilities—from extracting data from relational databases with SQL to designing an executive-level dashboard in Microsoft Advanced Excel and communicating actionable business insights. It demonstrates strong analytical thinking, commercial awareness, and business communication skills that are highly valued by employers across Ireland in Data Analyst, Business Intelligence, Commercial Analyst, and Reporting Analyst roles.
